

Loan Approval & Banking Analysis Project

1. Project Objective

The objective of this project is to analyze loan applications, approval patterns, applicant income, credit history, loan amounts, and financial factors to help a financial institution improve loan approval decisions and reduce risk.

2. Tools Used

- Python (Pandas, Matplotlib, Seaborn)
 - MySQL Workbench
 - Power BI
 - Kaggle Dataset
-

3. Dataset Overview

Dataset contains:

- 4269 loan applications
 - Applicant income details
 - Loan amount
 - Loan term
 - CIBIL score
 - Education
 - Employment status
 - Asset information
 - Loan status
-

4. Key Analysis Results

Loan Approval Summary

- Total Applications: 4269
 - Approved Loans: 2656
 - Rejected Loans: 1613
 - Approval Rate: 62.22%
-

5. Business Insights

Copy the points from your:

`business_insights_report.txt`

6. Power BI Dashboard

Insert your two images:

- Page1_Loan_Overview_Dashboard.png
 - Page2_Applicant_Loan_Analysis.png
-

7. Final Recommendations

- Use CIBIL score as a major approval factor.
- Apply risk-based loan assessment.
- Focus on financially stable applicants.
- Analyze rejected applications for improvement.
- Automate approval decisions using customer risk profiles.
